The LevelActivity, MainActivity, and Controls files were adapted in part from code written by myself during Frank Iben's Android tutorials.

On that subject, if you're having any trouble with Android Studio, I recommend stopping by Frank's events. I've learned more practically applicable skills in his tutorials than I have all semester in some of my other classes.

Stackoverflow and the Android website were consulted to find functions to accomplish unfamiliar tasks. Any nontrivial "heavily adapted" code is noted within the source files.

Other acknowledgements provided in the code where appropriate.

Also, special thanks to Isaac Griswold-Steiner for the .gitignore file he recommended.
